2 Methods

$$t = \frac{\bar{X}_1 - \bar{X}_2}{s_p \times \sqrt{\frac{1}{n_1} + \frac{1}{n_2}}} \quad (1)$$

In equation (1), \bar{X}_1 and \bar{X}_2 are the mean of the samples. Similarly, n_1 and n_2 are the sample sizes, and s_p .

3 Results

The mean value of group x (128.33) was larger than the mean value of group y (113.64; t: 5.2, p: 7.05×10^{-6}).
